Subject: Soils Reports (City of Glendale Policy)

Unless a soils report is on file that is reasonably current, one shall be submitted prior to review of all new buildings, residential tracts and commercial site development. If the report recommends any fill or reworking of existing soil, the soil engineer shall observe, test and verify that such work was performed in accordance with the soil report. A final report must be provided to the inspector prior to any foundation inspection. This shall be noted under special conditions on the permit for the inspector to be aware of. All this shall be according to the 1997 UBC Chapter 18 and Appendix Chapter 33. When a report is not on file, exceptions may be granted on a case by case basis with manager approval.
